# STUDY ON THE HIGH PERFORMANCES ATHLETES AT 800 m DISCIPLINE 

GHEORGHE Daniel ${ }^{1}$, IVAN Paula ${ }^{1}$

#### Abstract

* Aim: Study bibliography;The collection and tabulation of the following parameters: performances, date of the result, date of birth, citizenship, place of competition, and the place of the first 100 athletes outdoor all time; Processing statistical and mathematical data specified above, regarding the following indicators: number of cases, maximum value, minimum value, amplitude, mode, median, average, quartile 1,3 , quartile difference, dispersion, average of absolute deviation, standard deviation, coefficient of variation and percentage; Evaluation of the results and their interpretation.

Methods: As a research method we have used the case study, observation, statistics and graphics. Results: After data processing have resulted 9 summary tables and 4 graphs. Conclusions: The competition is significantly higher in women than in men. To get good results in international competitions men must obtain less than 1: 43.01 and women 1:56.20. Women are well represented in the top 100 by 5 athletes, while men have no athlete.

Keywords: athletes, middle race, high performance, statistics

## Introduction

Athletics has been defined in terms of poetry, but also physics and mathematics, as a confrontation with yourself, with space and time. Interesting, however, that off all athletic disciplines, middle and long run, seem to illustrate more clearly this confrontation. Psychic structure off middle and long runners is totally different from that of sprinters, throwers or a jumpers. He is introverted, less communicative, manifest an extremely strong willed, because otherwise he could not overcome any difficulties distances and through which passes when expect less. (Puică, 1993)

Physiological characterization of effort, in particular of the resistance - especially at the distance of 800 m is related to the phenomenon of adaptation of the organism to the specific effort. Alongside this essential rule in athletic training we take into consideration other factors, such as anthropometric indicators, and indicators of physical preparation. (Barbu, 1988)

Knowing by the coach of the somatic physiological and psychic runner portrait, it is a requirement without which it can fail gravely in the process of training. Finding the most suitable method to achieve the intended purpose adapted to the different situations that arise at the beginning of, or during it, it is an issue preoccupying heavily on specialists. Is why when making training plans for middle and long runners, must be taken into consideration a series of data motor skills, moral and the will and morphologic development of each runner. (Alexandrescu, Rugină, 1971)

For elite-level athleticism, the race by 800 m requires about $70 \%$ of anaerobic resistance - $30 \%$ aerobic. This idea is particularly useful for the optimal distribution of workload to develop these capabilities and their limitations in the ability to be trained. (A.N.S-I.N.C.S, 2005)

## Methods

As objectives we have proposed:

- Study bibliography.
- The collection and tabulation of the following parameters: performances (www.iaaf.org), date of the result, date of birth (www.sports-reference.com), citizenship, place of competition, and the place of the first 100 athletes outdoor all time.
- Processing statistical and mathematical data specified above, regarding the following indicators: number of cases, maximum value, minimum value, amplitude, mode, median, average, quartile 1,3 , quartile difference, dispersion, average of absolute deviation, standard deviation, coefficient of variation and percentage. (Cărbunaru, 2009)
- Evaluation of the results and their interpretation.

As research methods we used the case study, observation, statistics and graphics.

## Results

After data processing have resulted 9 summary tables and 4 graphs.

## Discussion

Statistical indicators of results (table 1):

- Compared with the 1993 data, the best performance of study is less so in women $(0.22 \mathrm{sec})$ and men $(2.09 \mathrm{sec})$. (A.N.E.F.S., 1993)
- The number of cases in men (244) is greater than the female (165). The rivalry is significantly higher in women than in men.
- The amplitude of results for women $(4.24 \mathrm{sec})$ is greater than that of men $(2.95 \mathrm{sec})$.
- The mode of performances to the men is 1:43.38 and for women 1:56.00.
- The median of performances to the men is 1:43.13 and for women 1:56.21.
- The average of performances to the men is 1:43.01 and for women 1:56.20.
- The middle interval (half of cases) for men is lower than that of women, as follows: 0.55 sec between 1:42.79 and $1: 43.34$ at the men and 0.92 sec between 1:55.78 and 1:56.70 at the women.
- We have a very good homogeneity both men ( $0.53 \%$ ) and women ( $0.67 \%$ ).

Years of recording the results (tables 2 and 3 ):

- For first place to men we have 94 entries and for women 85 . In top 10 years of recording the results for men we have $58.51 \%$ and for women 55.29\%.
- For second place to men we have 38 entries and for women 33. In top 10 years of recording the results for men we have $73.68 \%$ and for women $54.54 \%$.
- For third place to men we have 18 entries and for women 14. In top 10 years of recording the results for men we have $77.77 \%$ and for women $57.14 \%$.
- For places 4-8 to men we have 24 entries and for women 11. In top 10 years of recording the results for men we have $75 \%$ and for women 81.81\%.
- For places 9-14 to men we have no registration
and for women 1. In top 10 years of recording the results we have $100 \%$ both men and women.
- For places > 14 to men we have 70 entries and for women 21. In top 10 years of recording the results for men we have $55.71 \%$ and for women $47.61 \%$.

Years of athletes birth (tables 4 and 5):

- For first place, in top 10 years of athlete birth, we have for men $71.27 \%$ and for women $81.80 \%$.
- For second place, in top 10 years of athlete birth, we have for men $57.89 \%$ and for women $54.54 \%$.
- For third place, in top 10 years of athlete birth, we have for men $66.66 \%$ and for women $50 \%$.
- For places 4-8, in top 10 years of athlete birth, we have for men $50 \%$ and for women $63.63 \%$.
- For places $9-14$, in top 10 years of athlete birth, we have $100 \%$ both men and women.
- For places > 14, in top 10 years of athlete birth, we have for men $62.85 \%$ and for women $33.33 \%$.

Citizens of athletes (tables 6 and 7):

- For first place, in top 10 citizens of athletes, we have for men $87.23 \%$ and for women $85.88 \%$.
- For second place, in top 10 citizens of athletes, we have for men $73.68 \%$ and for women $69.69 \%$.
- For third place, in top 10 citizens of athletes, we have for men $77.77 \%$ and for women $92.85 \%$.
- For places 4-8, in top 10 citizens of athletes, we have for men $66.66 \%$ and for women $81.81 \%$.
- For places 9-14, in top 10 citizens of athletes, we have $100 \%$ both men and women.
- For places $>14$, in top 10 citizens of athletes, we have for men $81.42 \%$ and for women $66.66 \%$.

Cities of recording the results (tables 8 and 9 ):

- For first place, in top 10 cities of recording the results, we have for men $57.44 \%$ and for women $37.64 \%$.
- For second place, in top 10 cities of recording the results, we have for men $84.21 \%$ and for
women $54.54 \%$.
- For third place, in top 10 cities of recording the results, we have for men $88.88 \%$ and for women $78.57 \%$.
- For places 4-8, in top 10 cities of recording the results, we have for men $95.83 \%$ and for women $100 \%$.
- For places $9-14$, in top 10 cities of recording the results, we have $100 \%$ both men and women.
- For places > 14, in top 10 cities of recording the results, we have for men $74.28 \%$ and for women $47.61 \%$.

## Conclusions

- The competition is significantly higher in women than in men.

To get good results in international competitions men must obtain less than 1: 43.01 and women 1: 56.20

- Women are well represented in the top 100 by 5 athletes, while men have no athlete.

## Aknowledgements

Thanks to everyone who helped me to realize this material, which I have provided bibliographic materials.
